# Idea/Approach Details

## Describe your idea/Solution/Prototype here:

- Our topic is web based document management system, in this application first we are creating a registration and login page. In the user page user can upload and view their documents. They can also view the status of the uploaded documents(approved, denied). For sample data we are taking officers of 4 different designation and each level of officers can either approve or deny the documents, if the particular level of officer approves the document it will go to the next level officer. When the last level officer approves the document the final status can be viewed by the user .

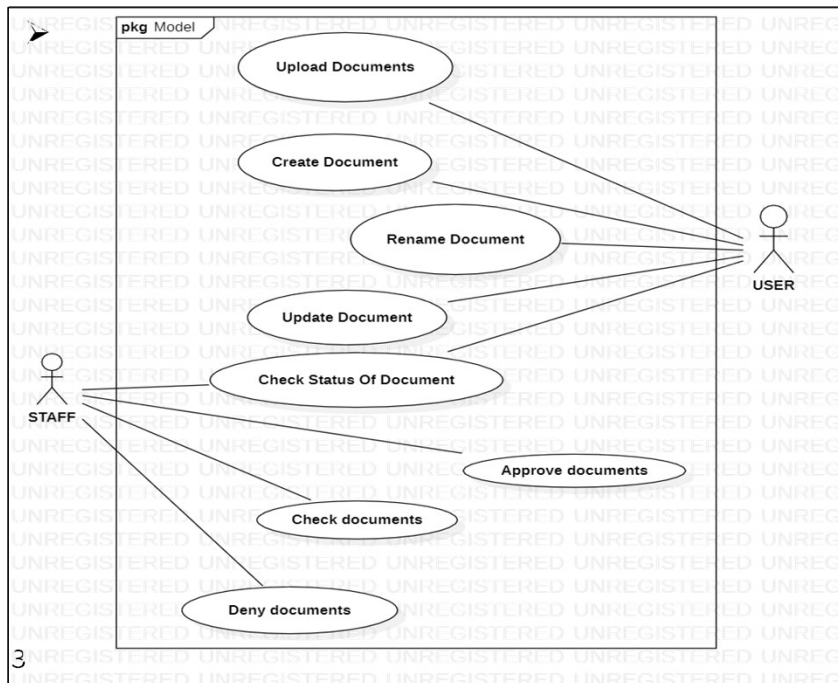

## Describe your Technology stack here:

- HTML
- CSS
- BOOTSTRAP
- JAVASCRIPT
- SQL

# Idea/Approach Details

## Describe your Use Cases here

## Describe your Dependencies / Show stopper here

- Dependencies- Team members, Tasks- Front end and back end
- Show stopper- It simplifies the process of documents checking and the user can also know the status of their approved documents.
